Emerging market and developing nations will continue to struggle with the Covid-19 pandemic and its aftermath even as a few major economies spur the strongest post-recession global growth in 80 years, the World Bank said. Global gross domestic product will expand 5.6% this year, up from 4.1% forecast in January, the Washington based development organization said in its semi-annual Global Economic Prospects report. That will be fueled largely by a 6.8% expansion in the US and 8.5% in China.

In regional news, Dubai's property sales hit a four-year high of AED11.11 billion (USD3.02 billion) in May as the economy continues to recover from the coronavirus pandemic, according to listings portal Property Finder. This is the highest value of monthly property transactions recorded by the emirate since March 2017. In Saudi Arabia, Business conditions improved at the quickest pace in more than three years in May, helped by further easing in virus-related restrictions. The kingdom's Purchasing Managers' Index survey compiled by IHS Markit rose to the highest since January, supported by an increase in new business along with an uptick in export orders. The pace of expansion was the fastest since December 2017.

In corporate news, Emaar Properties PJSC's five-month sales surged as Dubai's real-estate market bounced back from the impact of the pandemic. The company put total property sales at AED10.5 billion (USD2.9 billion), compared with AED3 billion a year ago.

We continue to be prudent in our fundamentally based approach, searching for deep value in the names we acquire and holding relatively high levels of cash in order to offer our investors the best returns in the long term instead of searching for short-term gains.
